References format to be used in MSE 380, 381, 480, 482

We will use the reference format required by the Journal of the American Ceramic Society

These instructions may be found online:  http://onlinelibrary.wiley.com/journal/10.1111/(ISSN)1551-2916/homepage/jace_author_guidelines.html#refstyle

References

*Journal of the American Ceramic Society* {or *International Journal of Applied Ceramic Technology* or *International Journal of Applied Glass Science*} uses a numbering system for citations and the corresponding references. Complete information is essential. Manuscripts without complete references will be sent back to authors prior to entering the review process.

**General Notes**

- Within the text denote each citation as a superscript number attached to the appropriate word. Additional text (e.g. author or journal name) is not necessary.
- Citations are numbered sequentially, first in the text, then through the figure and table captions.
- The bibliography (reference list) appears after the body of the manuscript in a numbered-list format with double-spaced lines.
- Each reference can be listed only once and must have its own number that corresponds to the citation number in the text.
- Each reference is formatted using the Vancouver style described below. A complete guide can be found at http://net/files/Ref/VANCOUVER%20Reference%20guide.pdf
- Any reference to a personal communication should be given a number in the text and placed, in correct sequence, in the references.
- Papers that are "in press" can be cited in a submission, but the paper must be available to provide to reviewers. If possible, the reference should be updated during copy-editing.
- The use of software tools, such as EndNote for reference management and formatting are recommended. EndNote reference styles can be searched at http://endnote.com/downloads/styles.

**Formatting Author Names**

- Each author is listed by last name followed by initial(s), separated by a space.
- A sole author or the final author in a list is followed by a period.
- For 2 to 6 authors, a comma separates each author.
- References with more than 6 authors are limited to the first 6 followed by “et al.”

Examples

Green AB. (one author)

Green AB, Yashida C. (2-6 authors)

Green AB, Yashida C, Small BE, Jones Q, Han S, Simpson, H, et al. (more than 6 authors)
Journal Articles

- Article title in sentence case (only first word is capitalized) followed by a period.
- Journal title abbreviated in accordance with the Chemical Abstracts Service Source Index (CASSI) in standard format (no italics, bold, quotations, etc.) followed by a period.
- Year(month in parentheses, optional);Volume(issue in parentheses if available):1st page-lastpage
- DOI is optional for “print” journals; cited papers published only electronically must include the DOI.
- End each listing with a period.

Examples

Book and Conference Proceedings References

Include in the following order and format as applicable (see examples)

- Authors' names (according to rules above)
- Chapter/section/article title in sentence case followed by a period
- “In:” editors' names, followed by “, editors.”
- Book title in sentence case followed by a period
- Non–English titles of books should include the English translation of the title, in parentheses, following the non–English title.
- Publisher's location: name, year of publication; and page range as “p. start-end”
- Papers from proceedings should include conference and/or proceedings title in title case (see examples)

Patent

_________________________________________________________________________________

When you need to refer to a manufacturer:

Manufacturers

Manufacturer–specific information regarding materials or equipment used in the work should be included in parentheses following the generic name for the material or equipment, for example, 'optical microscope (Model 123, Wabash Instruments, Center City, IN).'
